Linkedin: Rahmat Ilahi Github: Rakuszz0 Website: https://rahmat-pearl.vercel.app/

I'm Rahmat, a Full Stack Engineer with 2.5+ years of professional experience building modern, performant web applications. I specialize in crafting lightweight and responsive UIs using Next.JS and TailwindCSS, combined with modular, scalable APIs built in Go or Express.JS (REST & gRPC). Throughout my career, I've contributed to 30+ projects and successfully delivered 40+ web applications, spanning campaign platforms, CMS-based websites, POS systems, and more. I bring strong analytical thinking and problem-solving ability, supported by a keen eye for both visual detail and technical structure.

Work Experience

PT Saldogame — Jakarta, Indonesia.
Freelance Backend Engineer. — 2024-01 to Present.

- Developed and maintained backend services for a mobile-based web platform providing game top-up services and digital voucher products (Google Play, etc), ensuring system reliability and secure transaction processing.
- Engineered a modular REST API for a Point of Sale (POS) system tailored for SMEs, integrating key business operations such as purchasing, sales, inventory control, supplier/customer management, branch-level separation, and financial reporting, designed for extensibility and real-time data tracking.
- Delivered 3 dynamic company profile websites for B2B clients using a CMS-driven architecture, enabling clients to manage and publish content independently while ensuring mobile responsiveness, SEO compliance, and modern UI standards.

PT Kuy Play. — Jakara, Indonesia.
Freelance Backend Developer. — 2025-08 to Present.

- Built and integrated end-to-end features including frontend modules, backend APIs, and payment flow implementation to support digital product purchases and top-up transactions on a mobile web platform.

Personal Client. — Jakara, Indonesia.
Fullstack Developer. — 2025-06 to 2025-10.

- Refactored an insurance application setup using Golang, Gin Framework, GORM, and Microsoft SQL Server.
- Built a personal e-commerce backend API with Golang, Echo Framework, GORM, and MySQL.
- Developed client projects using React.js, Golang, Echo Framework, GORM, and MySQL.
- Developed client project for sosial Campaign using React.js, Golang, Echo Framework, GORM, and MySQL.

PT Traders Family. — Jakara, Indonesia.
Backend Developer. — 2023-06 to 2024-08.

- Designed and implemented the backend architecture for a stock trading application using TypeScript, Fastify.js, TypeORM, MySQL, Redis, and gRPC, ensuring scalable and high-performance system communication.
- Developed a stock trading application using Golang, Go Fiber, GORM, and MySQL, successfully delivering the project within 3 months with stable and maintainable backend services.

- Built a personal e-commerce backend API using TypeScript, Fastify.js, TypeORM, and MySQL, completed within 3 weeks, focusing on clean architecture and RESTful API standards.
- Refactored and optimized an internal client analyst division system using TypeScript, Fastify.js, TypeORM, and MySQL, improving code maintainability and delivery efficiency within 1 month.
- Developed core features for the Traders Family application, supporting both user and admin modules, including authentication, transaction flow, and data management functionalities.
- Developed and maintained an internal marketing division platform to manage company client data, improving workflow efficiency and internal reporting processes.

TerasKofee. Palembang, Indonesia.
Barista & Waiter. 2022-07 to 2023-01.

- Served customers and prepared coffee beverages efficiently in a fast-paced environment.

RenzuStudio. Palembang, Indonesia.
Photographer & Editor. 2021-08 to 2022-06.

- Conducted photo shoots and performed photo editing for various client projects.

Education

- Dumbways.id. 2023-01 to 2023-03.
  Full stack Developer Program. Final Score: 82/100.
- SMA Negeri 1 Sungai Lilin 2012-06 to 2015-04.
  Studied Sciences, Mathematics, English, Public Speaking, Problem Solving, Teamwork, and Leadership. Finak Score: 86/100.

Expertise

- Frontend Development: Bootstrap, CSS, HTML, Javascript, Next.JS, React, SASS, TailwindCSS, Typescript
- Backend Development: Echo, Express.JS, Fiber, GORM, Go, gRPC, Mongoose, Node.JS, Prisma, REST API
- Database: MySQL, PostgreSQL, MongoDB, Microsoft SQL Server.
- DevOps: Amazon EC2, Amazon ECS, Amazon EKS, Docker, Git, Kubernetes, Linux Ubuntu, NginX, Pm2

Organizational Experience

IPPSA. Jakarta, Indonesia.
Deputy Head of Division – Law & Advocacy. 2024-07 to 2026-03.

- Led the recruitment process for new members, resulting in a 25% increase in applicants compared to the previous year.
- Coordinated fundraising activities for natural disaster relief and social initiatives.
  Successfully conducted internship programs for prospective successors, with 80% of interns becoming active members.
- Evaluated all members based on performance through a report card system.
- Submitted legal documentation to the Indonesian government.

IPPSA. Palembang, Indonesia.
Deputy Cairment 2022-07 to 2024-03.

- Designed and implemented 8 work programs for the organization.
- Successfully launched an internal communication initiative that contributed to a 25% increase in member attendance at organizational meetings.

Portfolio – Personal Portofolio

Personal Portfolio Website is a futuristic and interactive portfolio platform designed to showcase projects, skills, and professional experience in a modern and unique way. The website combines a clean UI with advanced visual effects and interactive components, delivering an engaging user experience that stands out from typical portfolio websites..

Features:

- Digital Command Center UI – Unique asymmetric layout with a futuristic dashboard-style interface.
- Interactive Terminal Access – Functional terminal emulator inside the website for quick CLI-style navigation and data access.
- Bento Grid Portfolio – Dynamic and well-organized portfolio layout using a modern bento grid design.
- Glassmorphism & Neon Visuals – Premium glass UI effects with neon highlights and grain/noise textures.
- Smooth anchor scrolling and interactive terminal-based redirects for better UX.

Deployment: https://rahmat-pearl.vercel.app
Source Code: https://github.com/rakuszz0/Portofolio
Tech Stack: React.js / Vite.js / Tailwind CSS / Framer Motion

Portfolio – E-wallet(e-money-clone)

E-Wallet App is a modern digital wallet application built using Flutter, designed with a clean and user-friendly interface. This project simulates various financial services such as top-up, transfer, withdrawal, and QRIS payments. It also supports managing multiple bank funding sources, transaction tracking, and reward features. The application focuses on delivering a realistic transaction flow with structured state management and smooth UI experience.

Features:

- Balance Management – View total wallet balance with a modern dashboard UI..
- Top-Up Feature – Add balance easily through simulated top-up flow.
- Transfer Feature – Send money to other users or bank accounts.
- Withdraw Feature – Withdraw wallet balance to registered bank accounts.
- QRIS Scanner – Simulate QRIS scan & pay for instant merchant payments.
- Upload QR from Gallery – Supports QR payment simulation using uploaded QR images.
- Transaction History – Track all transactions with detailed activity logs.
- Sort & Filter Transactions – Sort by date/amount and filter by service type.
- Finance Services – Manage funding sources, rewards, savings, insurance, and loan simulation.
- Profile Management – Update profile details, manage PIN security, and membership status.

Deployment:
Source Code: https://github.com/rakuszz0/e-money-clone

Portfolio – WaysHub Front End

is a video sharing platform that allows users to upload, manage, and explore video content through a clean and responsive interface. The application is built using React.js for the frontend and Golang for the backend to ensure performance and scalability. PostgreSQL is used as the main database with GORM as the ORM to simplify database operations. Cloudinary is integrated for media storage and optimization to support smooth video upload and delivery.

Features :

- User Authentication System – Secure login and registration flow.
- Video Upload & Management – Users can upload and manage their video content.
- Video Streaming – Smooth video playback for viewers.
- Comment & Interaction System – Users can interact through comments.
- User Profile Management – Manage profile details and uploaded content.
- Cloudinary Integration – Media upload and optimization for better performance.
- Responsive UI – Works well on desktop and mobile.

Deployment: https://wy-fe.vercel.app/
Source Code: https://github.com/rakuszz0/wy_Fe

Portfolio – WaysHub API

WaysHUb App API is a backend RESTful service built to support the WaysHub video sharing platform. This backend handles core functionalities such as authentication, user management, video content management, and secure media handling. Developed using Golang with a structured architecture, the API is designed to be scalable, maintainable, and secure. It implements JWT authentication for protected routes and password encryption to ensure user data safety. PostgreSQL is used as the main database with GORM as the ORM for efficient database operations.

Features :

- Authentication & Authorization – Secure login and registration using JWT-based authentication.
- Password Encryption – User passwords are hashed securely using bcrypt.
- User Management – Manage user profile data and account information.
- Video Management API – Create, update, delete, and fetch video content.
- Comment, Like, & View System API – Users can add and view comments on videos.
- Cloudinary Integration – Media upload and optimization for better performance.
- RESTful API Structure – Clean endpoint design with consistent response formatting.
- Database Integration – PostgreSQL database handling using GORM with relational modeling.
- Middleware Security – Protected routes with authentication middleware and validation.

Deployment: https://wy-fe.vercel.app/
Source Code: https://github.com/rakuszz0/Wayshub_Echo
Tech Stack: Golang, JWT, GORM, PostgreSQL, Cloudinary, bcrypt, REST API

Portfolio – macOS System Monitor CLI

macOS System Monitor CLI is a command-line monitoring tool built using Golang, designed to display detailed system information such as CPU usage, memory statistics, disk usage, energy/battery status, and network activity. This project collects real-time system metrics by executing macOS native commands and parsing the output into a clean, readable CLI report. It is useful for quickly checking system health, performance, and resource usage directly from the terminal.

Features of the API:

- CPU Monitoring – Displays CPU usage, CPU model, number of cores, load average, and per-core statistics.
- Memory Monitoring – Shows memory usage details using vm_stat, total physical memory, and memory pressure status.
- Energy & Battery Information – Retrieves battery status, AC power source information, and thermal conditions.
- Disk Usage & Activity – Displays storage usage, disk activity stats, and disk list details.
- Network Monitoring – Shows active network interfaces, TCP/UDP connections, bandwidth usage, and external public IP.
- Command Output Parsing – Parses raw outputs using buffered scanning to generate structured CLI results.
- Lightweight & Fast – Runs quickly without requiring external libraries or heavy dependencies.

Supported macOS Commands Used:

- top, sysctl, mpstat
- vm_stat, memory_pressure
- pmset
- df, iostat, diskutil, system_profiler
- ifconfig, netstat, nettop
- curl

Project Type: CLI Tool / System Monitoring Utility
Tech Stack: Golang, macOS CLI Commands, bufio.Scanner, os/exec
Source Code: https://github.com/rakuszz0/mac-monitor

Portfolio - Edumanage (School Management System)

Edumanage is a fullstack school management system designed to streamline educational administration processes for both Admins and Teachers. The platform provides role-based access with separate dashboards, enabling efficient management of teachers, schedules, payroll, performance evaluations, training programs, and reporting. The frontend is built using React.js with a modular component-based structure, while the backend is developed using Golang to deliver secure and scalable REST APIs.
This project focuses on building a structured and maintainable system architecture, implementing authentication, role-based routing, and a clean dashboard UI experience for different user roles.

Available Features:

- Login and register forms that function properly for both Admin and Teacher roles.
- Role-based authentication system (Admin / Teacher) with protected routing.
- Secure logout functionality that clears session and prevents unauthorized access.
- Admin dashboard for managing teacher data (add, update, delete teacher profiles).
- Schedule management module for admins to create and manage teaching schedules.
- Teacher dashboard to view assigned schedules and teaching activities.
- Performance evaluation feature for tracking teacher performance reports.
- Payroll management system to display salary records and payroll history.
- Training management module for assigning training programs to teachers.
- Reports page to generate and display administrative summaries for monitoring.
- Teacher profile page that displays teacher identity and account information.
- Help and support page for teacher guidance and system usage instructions.
- API Endpoints to perform CRUD (Create, Read, Update, Delete) operations on Teacher, Schedule, Payroll, Training, and Performance data.
- API Endpoints for Login and Register with JWT-based authentication.
- Password hashing middleware using Bcrypt for secure credential storage.
- JWT middleware to authenticate users and protect restricted endpoints.
- Clean UI dashboard layout with separate AdminLayout and TeacherLayout (Sidebar + Navbar).

Tech Stack: React.js, CSS, Golang, Mysql, Authentication & Authorization (JWT),
Database Integration (GORM)
